

Digitalize PHA/ HAZOP & LOPA Reports

To unlock your risk, IPL and SIF data, and manage it better

Alongside partner company aeShield, we have successfully migrated HAZOP, LOPA, IPLs, and more from a wide variety of legacy formats into a new data-centric environment.

Migration Plan

After project kick-off, our team establishes a robust migration plan to achieve consistent and repeatable implementation, whatever format your source data is in. We identify how the target software will be populated to align with your current structure and documentation requirements.

Training

The end goal is to hand-over the migrated data to your team. To make that transition effective, we recommend your core team starts with face-to-face training, either delivered via Teams/Zoom training sessions, or face-to-face.

Our self-paced online aeShield training modules are ideal to get new staff up to speed quickly. We can provide non-English language modules as an add-on option.

Hand-over

After initial training, we hand-over to your team to maintain the data in the aeShield environment.

Optional Support

You can also contract with us to support complex project needs, or we can act as your independent project reviewer with assured aeShield expertise.

Book a TEAMS call to discuss a migration project.
